## Sealth Pellness

For 2011, Salinas Corporation is launching two new packaging for the Health and Wellness product line. Over the past years, we have received feedback that our product Nigari is good and effective. At the same time, suggestions were coming in for a smaller packaging to make it more affordable. So, as an innovation, we bring you the 10 mL Nigari bottle. This new SKU is meant to make the technology of liquid mineral supplementation available to more people.

According to the DOH, the incidence of non-communicable diseases like diabetes. hypertension and cancer are the top ten killers of modern society today. The number of people getting afflicted with these diseases is increasing and this is partly due to the prevalence of processed foods that are lacking in nutrients, like minerals.

As for enhancing one's immunity through improving skin integrity, we also came up with a spray bottle for Tropics Mineral Skin Bath and Lotion. This new packaging is going to give a better and easier experience in the application of minerals that can enter through our skin pores. Since spraying can also prevent those who use our product from dropping the mineral liquid on their palms and feel a stickiness. With this, customers can now spread the minerals found in Tropics without having to wash hands after.
